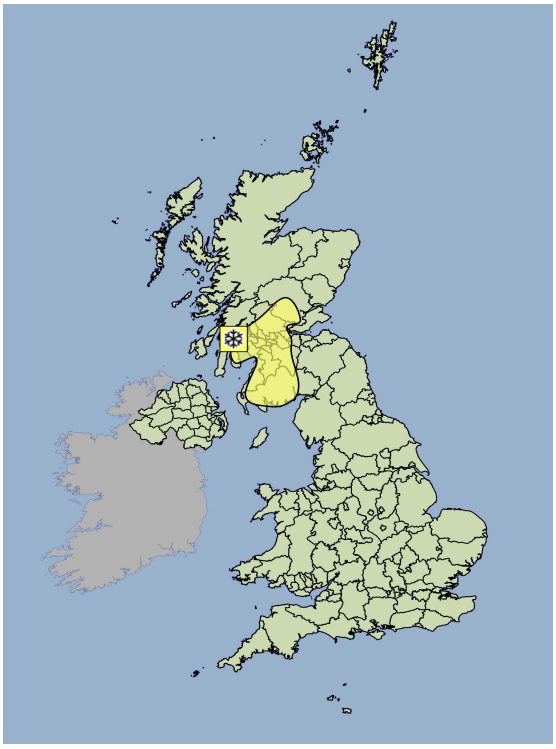
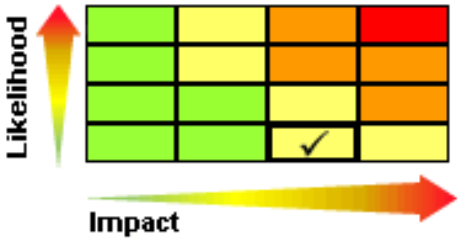
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold, unstable northwesterly flow will bring wintry showers. During much of Thursday the yellow area will be relatively sheltered and see few showers, but a trough moving southwards later on Thursday night will bring more frequent sleet and snow showers. Given sub-zero ground temperatures, snow is likely to settle on untreated surfaces, especially on high ground.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **03:00 on Fri, 15th Jan 2016** until **12:00 on Fri, 15th Jan 2016**

Sleet and snow showers will become more widespread later on Thursday night and last into Friday morning. These could bring localised accumulations of 1-3 cm to low levels inland and perhaps 5 cm on ground above 200 metres. Icy stretches are also possible on untreated roads especially where sleety showers fall on sub-zero surfaces. Please be aware of the risk of some difficult driving conditions during the Friday morning rush hour, and the possibility of localised travel disruption.
